

Class diagram for Money Exchange Project

Diagram Scope & Purpose

The class diagram represents the main objects of the Money Exchange System. The diagram contains five main classes. Database, Customer, Currency, exchange_rate and exchange_transaction.

Database : Manage database connection and creates database tables.

Customer : stores customer details (customer ID, customer name, phone, email)

Currency : it is represents the currency details. Such as currency code, currency name and currency symbol.

exchange_rate : store exchange rates between from currency and to currency. and also rate and date.

exchange_transaction : it is stored completed currency exchange details. (customer, from currency, to currency, exchange rate, converted amount and transaction date)

Relationship

Relationship	Multiplicity	
Customer → Exchange_transaction	1 to 0..*	One Customer can have many Exchange_transaction s.
Currency → Exchange_rate (FROM)	1 to 0..*	One Currency can be used in many Exchange_rates as a from currency
Currency → Exchange_rate (TO)	1 to 0..*	One Currency can be used in many Exchange_rates as a to currency
Currency → Exchange_transaction (FROM)	1 to 0..*	One Currency can be used in many Exchange_transaction as a from currency
Currency → Exchange_transaction (TO)	1 to 0..*	One Currency can be used in many Exchange_transaction as a to currency
Exchange_rate → Exchange_transaction	1 to 0..*	One Exchange_rate can be used by many Exchange_transaction

Functionality represented

The main functionality of the project is as below.

When the start currency exchange process, the system will identifies the customer. If customer is not exists, then customer need to register first. Then select the from currency and to currencies. Can view the current exchange rate. Then calculate the converted amount. And finally save the transaction details. This single class diagram provides an overall view of the system structure and how its main components interact.
